A strong network

Medicine and healthcare are changing. The medical sector is in constant flux and facing increasing competition worldwide. In order to remain internationally competitive and successful as a technology leader over a long-term period, it is vital to monitor technological trends and respond to these at an early stage. The collaboration and exchange with regional, national and international competitors is important. This creates synergies, strengthens innovative capacity, and encourages international cooperation. This creates pioneering synergies, strengthens innovative capacity, and encourages international cooperation. This creates pioneering synergies, strengthens innovative capacity, and encourages international cooperation.

The aim of MedicalMountains is to link medical technology companies across Europe, and to organize themselves in an increasingly complex technological business location - it is vital to monitor technological trends and respond to these at an early stage. The collaboration and exchange with regional, national and international competitors is important. This creates pioneering synergies, strengthens innovative capacity, and encourages international cooperation. This creates pioneering synergies, strengthens innovative capacity, and encourages international cooperation. This creates pioneering synergies, strengthens innovative capacity, and encourages international cooperation. A regular training program is an essential element of professional and entrepreneurial success. The medical technology industry is currently facing enormous challenges. Knowledge is more than ever a critical factor to remain competitive at an international level. MedicalMountains assists companies in creating tomorrow’s resources.

To qualify themselves for the increasing complexity and growing demands to be faced, companies can advance their professional qualifications continuously through a comprehensive training program designed specifically for the medical technology sector. Taught by industry experts, current topics and technologies are addressed and explored.

Primarily small and medium-sized enterprises should receive the opportunity to attend practice-relevant seminars and certificate courses directly on-site with little time cost. Companies which are members of TechnologyMountains receive a discount on all courses.

The goals of MedicalMountains are clear: to network companies internationally, to establish their innovative power worldwide, to promote their growth, and to continue to expand their competitive advantages.

The service range begins with the regional and international acquisition of suitable cooperation partners for joint projects, continues with the provision of advice on opening up foreign markets, and ends with the global marketing of the cluster.

As part of the internationalization strategy, MedicalMountains implements innovative projects with companies that support the business and scientific community in increasing their international reputation and innovative power. Trade fairs, events and activities are also included in the performance portfolio. Joint presence at national and international trade fairs under the flag of MedicalMountains confirms the cluster’s professional image. Talks on current issues are held at evening information events and during consultation days to provide updates from and for the industry.

Innovations are the driving force behind growth and success. They lead to new products and services, which provide competitive advantages. Innovative companies always stay a step ahead of their competition. Therefore MedicalMountains supports companies through targeted personal and innovative technology transfer and constant networking to strengthen their innovative capacity.

Events such as the Innovation Forum, which brings together experts, companies and interested parties regularly, are a platform for new and ongoing projects. They are the basis for new development projects. Expert Roundtables are meeting groups where companies and scientists meet regularly on a particular topic and exchange information on the current standing of ongoing research. They are often the basis for new development projects.

In addition, MedicalMountains encourages specific clusters to work as a whole and in synergy. These synergies create a competitive advantage for both smaller and larger medical technology companies.

In order to encourage companies to work together and exchange information on current topics and technologies, MedicalMountains provides information on current funding measures.

Companions, which are members of TechnologyMountains, receive a discount on all courses.
